

Instructions

- 1) Run the reserveOxy.sql to create the database and the tables
- 2) Run the insert method with the csv file so that the data can be inserted into the tables
- 3)How to run our project:
 - Make sure MySQL passwords are included in the UserController file for all endpoints that require a MySQL connection
 - Open terminal and go to directory of Maven project (in our case, cd Desktop/DBuser)
 - Run command mvn install to compile project and build jar file
 - Jar file should be in target folder of the project
 - In our case, drag jar file to Desktop
 - Make sure there is a application.properties file in the same directory as the jar file (to run on port 80)
 - Open new Terminal window, and cd to directory with jar file (here, cd Desktop)
 - Run command java -jar DBuser-0.0.1.jar
 - Server should be running on port 80
 - Open browser at <http://localhost/homePage.html> to begin using website
